

KITCHENiQ • CEILINGiQ

Dear designers,

Thank you for using ETS NORD KITCHENiQ canopy configuration tool.
Here you can find the list of our newest additions and updates in both CEILING- and KITCHENiQ

Open **KITCHENiQ** [here](#)

Updates in **KITCHENiQ** include:

Version 2023.3.1.

- ▶ Grease canopies now available with UV cleaning
- ▶ New exhaust-only canopies with extra low front side (min height 250/400mm) and extra narrow minimum width (600mm)
- ▶ Steam canopies can now be designed up to 10 meters long
- ▶ Multiple canopy import from **KITCHENiQ** to Webshop
- ▶ K-values added to grease and steam canopies in both KiQ and MagiCAD/Revit
- ▶ User can now choose between different supply perforation options to get the desired pressure drop
- ▶ Separate reference values can now be added to each canopy under a project – inserted value is also later shown in Webshop
- ▶ Thermal convection method has been updated according to the latest DW172 standard
- ▶ New devices have been added to both calculation methods
- ▶ Calculation data is no longer lost when moving between different methods
- ▶ New and improved letter of specification
- ▶ Feedback information added to the bottom of the screen
- ▶ Faster login
- ▶ Various smaller improvements

Updates in **CEILINGiQ** include:

- ▶ New illustrative images for each module
- ▶ More detailed descriptions under module infoboxes
- ▶ New corner modules for supply and exhaust
- ▶ New horizontal supply module HCAH
- ▶ HCG AirGrip module now available with 100mm step

PS! New HM Watermist canopy will soon be available.

Looking forward to seeing you in our **KITCHENiQ** and **CEILINGiQ**!
